DO YOU recognise any symptoms?

Tinnitus
Sleep disruption
Concentration problems
Dizziness
Lethargy
Muscle pains
Depression
Memory loss
Some cancers
Skin tingling
Earaches
Headaches
Fatigue
Blood pressure effects
Miscarriages
Skin lesions
Anxiety

DO YOU
- use a mobile?
- have WiFi at home or work?
- live near a phone mast?

WHAT DO WE DO?

Helpline
For those with ES, their friends and family, to offer support and help where possible.

Newsletter
For information about others’ experiences, tips for coping, news and new research.

Directory
We support a directory of services and products for those with ES.

Aim to Inform
all those involved in benefits, disability issues, employment, hospitals, housing, public services, schools, shops and transport.

Doctors
Updated research about ES is available to the medical profession.

Research Material
Lists of scientific research studies are available on our website.

Website
For information, news, and open letters on health, housing, disability issues, etc...

WHO ARE WE?

ES-UK Trustees
Michael Bevington
Sarah Dacre
Brian Stein CBE
Dr Andrew Tresidder
Phil Watts

Scientific Advisers
Dr Andrew Goldsworthy
Dr Magda Havas
Professor Denis Henshaw
Professor Olle Johansson

Medical Advisers
Dr Stephen Brooke
Dr Dietrich Klinghardt
Dr Erica Mallery-Blythe

ES-UK
ElectroSensitivity UK
Providing support and information
ELECTROSENSITIVITY

Electrosensitivity (ES) is a physical intolerance of electromagnetic (EM) energy, first described in 1932. Electrical, radio and radar workers were the first affected. It has now spread into the general population as mobile phones, phone masts, WiFi and smart meters have become common.

TYPICAL SYMPTOMS
- Tinnitus
- Sleep disruption
- Concentration problems
- Dizziness
- Lethargy
- Muscle pains
- Depression
- Memory loss
- Some cancers
- Skin tingling
- Earaches
- Headaches
- Fatigue
- Blood pressure effects
- Miscarriages
- Skin lesions
- Anxiety

ES AT HOME
Avoidance:
- Reduce EM exposure, especially in the bedroom.
- Avoid WiFi, mobile and cordless phones, phone masts and low energy bulbs.
- Refuse wireless smart meters.

Protection
- Shielding materials can block EM radiation (see ES Directory).

WHO?
- Anyone can develop ES, including children.
- Some studies suggest that under 1% of the general population is badly affected, 3-8% moderately sensitive, and up to 30% are slightly sensitive.

PROGRESSION
- ES is often progressive. The sufferer may become sensitive to a wider range of frequencies, or their symptoms may become more severe, and include becoming sensitive to chemicals or other allergens. Life can become very restricted; some sufferers cannot use a computer or telephone, watch TV or go to the shops.

TYPICAL CAUSES
- Mobile phones
- WiFi
- Mobile phone masts
- Computers
- Cordless phones
- Smart meters
- Low energy lighting
- Power lines
- Substations
- Radar

ES AT WORK
Employers have a duty of care to provide a safe and healthy working environment by making reasonable adjustments. Since 2012 some people with ES who are unable to work have been awarded ESA. (Employment and Support Allowance).

ES AT SCHOOL
Some children cannot attend a school with WiFi. Cables can replace WiFi and mobiles can be kept switched off.

CAN ES BE DIAGNOSED?
Yes. Tests include brain blood perfusion scans, heart rate variability, molecular markers, genetic tests and 3d fMRI brain scans. In 2000 the International Classification of Diseases included ES based on the removal of EM exposure also removing the symptoms. Increasing numbers of centres abroad diagnose and treat ES, but no UK hospital diagnoses and treats ES yet (2018).
Real ES is physiological and different from Electrophobia - a psychological ‘placebo’ effect.

CAN MOBILE PHONES, MASTS AND WIFI CAUSE CANCER?
Yes. The World Health Organization’s International Agency for Research on Cancer classifies powerline and radio frequency radiation - like mobile phones, phone masts, WiFi and smart meters - as class 2B (possible) cancer agents. Leading scientists say they should now be class 2A (probable) or class 1 (certain). Many studies show increased risk of neurological diseases, cardiovascular effects and damage to DNA, in addition to ES.

OTHER COUNTRIES
Canada, Sweden and the USA recognise ES as a functional disability. In Sweden, people with ES can get grants to shield their homes. There are mobile phone free zones on public transport systems. The Council of Europe recommends green zones free of man-made EM radiation.

UK GOVERNMENT AND ES
The UK government still follows outdated advice on EM exposure, which protects people against only short-term heating effects, not long-term effects like cancers, ES and neurological harm.

SAFETY LIMITS
FOR RADIO FREQUENCY EXPOSURE
